Why use Black Dog Inspections?

Black Dog Inspections, LLC is a locally owned and operated Radon Measurement, Mitigation and Consulting Service legally registered to do business in Massachusetts & New Hampshire. We are a customer centered culture based organization with our own standards for excellence not driven by directions from others. We choose to be members of the American Association of Radon Scientists and Technologists (AARST) because it parallels our philosophy in customer quality and educational growth.

Our intent is to provide a valued cost effective radon solution using technology as much as possible. Our goal is to do more than the average, not charge for certain extras and obtain certifications when not required by law. We believe that recognition by certification when not required implies we go the extra step to give you the best service and product available.

One stop radon shopping

Full Radon Services
(Measurement, Consulting & Mitigation)

The EPA has suggested that all homes be tested for radon. Radon, a Class A carcinogen, is the second largest contributor to lung cancer in the United States and usually becomes a concern when purchasing or selling property.

Please refer to the free publication EPA 402-K02-006 "A Citizen's Guide To Radon". Most people are unaware of the danger of long term contact to high levels of radon and because it is not a visible threat they are unacquainted with the potential danger.

Black Dog Inspections, LLC is a NEHA/NRPP **certified** Radon Measurement and Mitigation provider. We use state of the art sophisticated electronic measurement and diagnostic instrumentation. Your radon related services will be credible, accurate, cost effective and timely.

Radon Mitigation

*Available in Massachusetts and New Hampshire.
NEHA/NRPP ID 103817RMT*

We provide accurate diagnostic services to assess the proper approach to your radon mitigation needs (either air or water) to give you the best system cost, ease of maintenance, and most reliable solution for your requirements. Our work is guaranteed to correct your problem.

Please note, correcting a high radon level is not an expensive process (radon in air mitigation typically runs between \$1000 to \$2000) but not knowing and exposing your family to potential danger cannot be equated to dollars.

Radon Consulting Services

We can assist you with any of your radon related concerns or provide solutions and recommendations for radon resistant new construction.

There are many myths about the health impact of radon gas. The fact is long term contact to high levels of radon gas can kill. The problem with radon gas is that it is colorless and odorless. Radon issues can be easily identified with proper equipment and corrected with an effective economical design.

Radon Services are available in

Massachusetts (Upper / Mid Cape and most of Eastern Massachusetts - Plymouth, Barnstable, Norfolk, & Middlesex counties)

New Hampshire (Hillsborough, Rockingham, Merrimack, & Sullivan Counties)

Other localities available please call for verification.

***The only way to know your danger level to radon is to measure it.
Do it right the first time by hiring a Radon Professional.***

Black Dog Inspections, LLC would like you as a customer. For the fastest response to your radon related needs, please dial the mobile number (**603-566-8176**).

Please visit our Web site at **www.blackdogin.com** for more information about our radon measurement, mitigation and consulting services.

Radon Measurements

Available in Massachusetts and New Hampshire.

Short term radon in air tests are performed using the **Radalink TeleMonitor or Sun Nuclear 1027** sophisticated electronic instruments equipped with tamper detectors that collect data hourly.

A single test performed following strict EPA protocol with fast results - no waiting for a mailed report. After test completion, the results are usually in your hand within an hour of upload.

"I feel this is the best continuous measurement equipment available to insure accurate, valid and prompt results for your radon measurements. You will not be disappointed with accuracy and turn around time of the results." *Eino Anttila*
